SUBJECT: CUSTOMER SPECIFIC PLANT LAYOUT DRAWINGS

#7-A-263

12/10/2001

All **ADVANTAGE** central chiller and cooling tower systems include customer specific detailed plant piping layout drawings along with typical installation drawings. Plant layout drawings include recommended piping sizes selected by experienced project engineers for the application and installation needs for each unique system. The drawings are suitable for installation contractor bidding.

To provide a plant layout drawing for a system, a customer supplied drawing or sketch of the installation area indicating the desired location of the cooling system and location of the cooling loads is required.

Some examples of plant layout drawings are shown below.
